How to Grant SynoForce Authorized User Access to Your Porkbun Account

Porkbun Authorized User Access lets SynoForce manage supported domain and account functions through our own Porkbun login without needing the client's password or MFA codes. The client keeps ownership and can remove access at any time.

How to Grant SynoForce Authorized User Access to Your Porkbun Account

Porkbun's **Authorized Users** feature allows SynoForce to help manage your domains and related Porkbun services through our own Porkbun account. This avoids sharing your Porkbun password or MFA codes.

Before You Start

Porkbun requires both accounts to have:

- A verified email address
- A verified phone number
- App-based two-factor authentication (2FA) or a security key enabled

You will also need the **SynoForce Porkbun username**. Please contact us if you do not already have it.

Grant SynoForce Access

1. Sign in to your Porkbun account.
2. Click **ACCOUNT** in the upper-right corner.
3. Select **Authorized Users**.
4. Enter the Porkbun username provided by SynoForce.
5. Click **Submit**.
6. Porkbun will send SynoForce an email invitation.
7. SynoForce will accept the invitation.

Once accepted, SynoForce will be able to access your Porkbun account through our own login without needing your password or MFA codes.

What Authorized Access Allows

Authorized Users can help manage domains, DNS, hosting, and other supported settings within your Porkbun account.

Authorized Users cannot:

- Change your Porkbun password
- Change your primary account email or phone number
- Change domain registrant/contact information
- Unlock or transfer domains
- Generate domain transfer authorization codes
- Remove WHOIS privacy
- Transfer domains to another Porkbun account

You can remove SynoForce's access at any time by returning to **ACCOUNT** → **Authorized Users**.

Important

Porkbun Authorized User access is broader than some registrars' delegated-access systems and may include the ability to make purchases using payment methods associated with the account.

If you only want SynoForce to manage specific domains rather than the entire Porkbun account, please contact us before granting access so we can discuss the best account structure.

Please do not send your Porkbun password by email.

If credentials ever need to be shared for a service that does not support delegated access, use the SynoForce One-Time Secret tool:
